Classic ‘Dieke Diagram’ for Rare Earth Ions

G. H. Dieke. Spectra and energy levels of rare earth ions in crystals
(Interscience Publishers. New York. 1968)

Single Flashlamp Solid-State Laser Pumping Chambers

- Configurations Available for all CW and Pulsed Solid-State Laser Media
- Close-Coupled Diffuse Reflector Design for Highest Efficiency and Pump Uniformity
- Radially Uniform Coolant Flow Reduces Aspheric Thermal Lensing in High Average Power Applications
- Available with Synthetic Fused Silica and Fluorescent Converting Doped Glass Filter Tubes
- Multi-Rod, Multi-Lamp Configurations
- Constructed from Materials that are Compatible with High Purity Coolants
- Standard, Custom, and OEM Configurations are Available

Nomenclature for Standard Size Pump Chambers	
Format: ϕF - ϕR XL C#E#F#	
ϕF is the lamp diameter, in mm.	If “- ϕF ” is absent, the lamp diameter is the same as the rod diameter. For rod diameters 5mm or smaller, the default lamp diameter is 5mm.
ϕR is the rod diameter, in mm.	Standard Sizes: 3, 4, 5, 6, 6.4, 7, 8, 9, 9.5, 10, 12.7, 13
L is the minimum laser rod length. Usually, we recommend using a rod length several mm longer for ease of insertion and the possibility of rework.	Standard Sizes: 50, 75, 100, 125, 150, 200
C# is the configuration	None - single rod, single lamp, coolant port on side C1 - single rod, two lamps C2 - Single rod, single lamp, bottom coolant port C3 - two rods, single lamp C4 - single rod, two lamps, split cooling
E# is the end cap material	None - clear anodized aluminum E1 - Titanium E2 - SS 316L E3 - Plastic
# is the flow or filter tube material	None - clear F1 - doped with Ce & Sm (for Nd:YAG) F2 - clear strengthened silicate glass F3 - Ce doped (for Alexandrite) F4 - 5% Sm doping (for Nd:YAG) F5 - 10% Sm doping (for Nd:YAG)

Examples:

4X125	$\phi 4$ mm diameter rod, $\phi 5$ mm flashlamp diameter, 125mm minimum rod length, single rod, single lamp, coolant port on side, clear anodized aluminum end caps, clear flow tube.
6-9.5X100C1F5	$\phi 9.5$ mm diameter rod, $\phi 6$ mm flashlamp diameter, 100mm minimum rod length, single rod, two flashlamps, clear anodized aluminum end caps, filter tube with 10% Sm doping.

Synthetic Fused Silica

Synthetic Fused Silica

Recommended for use with high peak power laser media that is not susceptible to UV solarization. (Er:YAG, CTH:YAG, Cr-Nd:GSGG, Ruby, Er:Glass, etc.)

Suffix: None

Sm Filter Glass

Strengthened Samarium Doped Silicate Glass

Recommended for use with Nd:YAG

Suffix: F1

Silicate Glass

Strengthened Clear Silicate Glass

Recommended for use with low peak power lasers (This material is somewhat UV solarization susceptible.)

Suffix: F2

Custom Pump Chambers for a Medical Application
Using 4 mm ϕ X 127 Cr, Tm, Ho:YAG Laser Rods

From Top: 6.4X150C1F3 Pump Chamber for Alexandrite, 4X125C3 Pump Chamber for Dual CTH:YAG Rods, Custom Design for 4 mm ϕ X 127 mm CTH:YAG, and 3X75C2 Prototype Pump Chamber for Er:Glass

Rack of custom pump chambers ready for final quality control

CS5X100F1 Pump Chamber. This pump chamber is for an application where the laser rod can not be disturbed during flashlamp replacement. The module on the top is the flashlamp module and the module on the bottom is the laser rod module. In this case, the laser module has a Samarium doped filter tube for use with Nd:YAG. The diffuse reflector is fabricated from high density composite aloxite.

HE7X115F1 Pump Chamber. This pump chamber is specially designed for high energy applications such as material processing or dermatology. Similar in size to our standard pump chambers, the High Energy “HE” line uses our high density composite aloxite diffuse reflector. The HE7X115F1 pump chamber can produce output energies up to 100J.

4X100 Er:YAG

Model 4X100

Er:YAG 2.94µm
 82%R Output Coupler
 25° C Coolant
 3.8% Slope Efficiency
 (@ 10 Hz, 20 W)

3X75 Er:Glass

Model 3X75

Er:Glass 1.535 µm
 Kigre QX/Er Glass
 80%R Output Coupler
 25° C Coolant
 2.7 % Slope Efficiency

4X125 CTH:YAG

Model 4X125

Cr,Tm,Ho:YAG 2.1 µm
 75%R Output Coupler
 25° C Coolant
 10 Hz
 7.5 % Slope Efficiency

5X75 Nd:YAG

Model 5X75

Nd:YAG 1.064µm
30%R Output Coupler
25° C Coolant
5 Hz
4.5% Slope Efficiency

7X125

Model 7X125

Nd:YAG 1.064µm
50%R Output Coupler
20° C Coolant

Through 800 µm Fiber

10X200C1 Er:Glass

Model 10X200C1

Er:Glass 1.535µm
Dual Flashlamps
40%R Output Coupler
25° C Coolant

5X125 Ho:YAG

Model 5X125

CTH:YAG 2.1 μm
 75%R Output Coupler
 10° C Coolant
 10 Hz
 350 μs pulse

4X125 Ho:YAG

Model 4X125

CTH:YAG 2.1 μm
 60%R Output Coupler
 15° C Coolant
 10 Hz
 800 μs pulse

LEGACY PUMP CHAMBERS

REPRODUCTIONS OF LEGACY KIGRE PUMP CHAMBER DESIGNS

During the 1980's, scientists and engineers at Kigre, Inc. pioneered the development of diffuse reflector solid-state laser pump chambers. In comparison to specular reflector pump chambers, Kigre's pump chambers were much smaller and offered nearly double the efficiency. Kigre's Barium Sulfate based diffuse reflector offered much higher reflectivity and pumping uniformity than any other pump chamber on the market.

The heart of Kigre's pump chamber design is the filter tube, which was fabricated from Kigre's strengthened rare-earth-doped silicate glasses. Doped with Ce^{3+} and/or Sm^{3+} , these filter tubes filter UV, unusable visible and IR regions of the flashlamp spectra, reducing thermal induced lensing and birefringence and in some cases eliminating ASE and parasitic oscillations. A portion of the absorbed energy is re-emitted in useful pump bands, further improving efficiency. The "FC" in Kigre's nomenclature stands for Fluorescent Converting.

Although Kigre discontinued its pump chamber line several years ago, MegaWatt Lasers now offers exact reproductions of Kigre's popular pump chamber designs. Manufactured using Kigre's drawings and specifications, these pump chambers are ideal replacements for existing laser systems. For new laser designs, we recommend using MegaWatt Lasers current pump chambers.

MegaWatt Lasers manufactures high quality laser pump chambers for a variety of laser applications covering all solid-state laser wavelengths. Our pump chamber designs provide unsurpassed performance, reliability and leak integrity to meet the demanding needs of your laser system design. Through many years of experience, we have optimized our pump chamber designs to provide features such as high efficiency diffuse reflectors and symmetric radial cooling. Standard pump chambers can be delivered off-the-shelf while the modular design allows for cost effective custom solutions. Contact us today to learn more about improving your performance and reducing cost of your solid state pump chamber needs!
